# FRIDURIT® MODULAR BENCHTOPS WITH GROOVE

FRIDURIT modular laboratory benchtops made of Technical Ceramics are only 20 mm thick and fit perfectly into the modern laboratory environment. The special design features a slightly rounded leading edge and an optional groove that can be formed into the top setting it apart from other benchtops. The groove provides an optical border round the workspace and catches small amounts of liquid.

## TECHNICAL CERAMICS

Laboratory worktops are exposed to extreme stresses. FRIDURIT Technical Ceramics is ideally adapted to your laboratory applications and can withstand all strains. FRIDURIT laboratory benchtops and sinks stay as good as new, even when permanently in contact with chemicals and subjected to high thermal or mechanical stresses such as scratching, scouring and cleaning processes.

Technical Ceramics is:

- easy to clean
- resistant to chemicals
- microbiologically clean
- scratch-proof
- heat resistant
- environmentally compatible

## GLAZE COLOURS

FRIDURIT laboratory benchtops are available in a variety of colours. You can find a selection of glaze colours available here. The benchtops are also available with black-speckled glazing.

The colours of the samples shown are not binding. Ceramic colour samples are available on request.

## The benchtop with the groove

### DIMENSIONS

FRIDURIT laboratory benchtops are produced ready for mounting and do not require reworking. The maximum benchtop size is 900 x 1800 mm.

The groove can be placed on any side of the top.  
An all-around groove is also possible.
